TAVERN CROWD

Top 100 Male Human Names

When creating human names in a fantasy setting, draw from diverse linguistic roots, such as medieval European, Middle Eastern, East Asian, African, and Slavic influences. Look for phonetic patterns that feature a mix of hard and soft consonants, varied vowel placements, and syllable structures ranging from one to three syllables. Consider cultural naming conventions like clan names (e.g., "of the Firestone Clan"), epithets (e.g., "the Brave"), or patronymics (e.g., "son of Alaric"). A concrete tip is to combine elements from different cultures; for instance, pair a Slavic first name with an African surname to create a unique yet believable character name.
